

NAME

Server – server process transactions

SYNOPSIS

server *port*

DESCRIPTION

server process transactions send from the clients. Clients might send transactions from different machines.

port is the port number that the server listens to for communications from clients. The port must be in the range 5,000 to 64,000.

USING SERVER

server process transactions from multiple clients.

EXAMPLES

The following command results server listening for messages on port 6000. When a message is received, it will process it and then wait for another message.

```
./server 6000
```

SEE ALSO

client(1), select(1)

EXIT STATUS

After 30 seconds of no incoming messages, the server should exit.
